

OPIOID USE DISORDER & PREGNANCY

Buprenorphine and Methadone:

In the right doses, medication treatment can:

- prevent withdrawal symptoms, cravings, and unhealthy use of opioids
- help prevent overdose
- make it more likely that your fetus will grow and develop appropriately and help prevent an early birth

Our staff is committed to providing compassionate care to all patients. Ask your provider today about the benefits and risks of medication treatment with methadone or buprenorphine.
